

RecordManager

26.6.2012

Ere Maijala

National Library of Finland

What It Is

A metadata management system for getting data into a discovery interface. Written in PHP. Utilizes Mongo database. Also suitable for other metadata aggregation needs.

Functionality

- Import
- Export
- Harvesting
 - OAI-PMH
 - MetaLib IRDs
 - SFX KB records
- Solr updating
- Normalization (xsl, php, mapping files)
- Deduplication
- OAI-PMH provider

Features

- Multiple Formats
- Concurrent tasks
- Incremental
- Command-line driven (no fancy UI...)
- Transparent
- Cronable
- Tunable
- Extensible
- Reliable (insert a nice disclaimer here.. ;))
